About 1043, 7 Mar 06, SA [b(6), b(7)(C)] collected one yellow jacket, one yellow t-shirt, and one yellow overcoat as evidence from Detainee [b(6), b(7)(C)] (ISN [b(6), b(7)(C)]) The clothing contained various amounts of blood throughout the articles. (See Evidence/Property Custody Document (EPCD) for details)

About 1055, 7 Mar 06, SA [b(6), b(7)(C)] and MP [b(6), b(7)(C)] interviewed Detainee [b(6), b(7)(C)] (ISN [b(6), b(7)(C)]) who stated his brothers and him were transferred from Compound 7 to Compound 3B a little before 2200, 6 Mar 06. Detainee [b(6), b(7)(C)] stated he does not know why they were transferred between the two compounds. Detainee [b(6), b(7)(C)] stated they went to head count at the front of the compound and directly after they went into caravan 5 to get some sleep. Detainee [b(6), b(7)(C)] stated when entering from the door facing the middle of the compound, all three of them laid head to feet in the order of Detainee DARAJ, himself, and [b(6), b(7)(C)]. the brothers were sleeping in the building when he departed to go to the mosque. He related two detainees were sleeping on the North side of the building and one was sleeping on the south side. All the brothers were sleeping in the center aisle way near the entrances to the building.

About 1255, 7 Mar 06, SA [REDACTED] reviewed the electronic movement log maintained by the TIF Operations, TIF, CBI, which reflected Detainee [REDACTED] Detainee [REDACTED] [REDACTED] and Detainee DARAJ were moved on 6 Mar 06 from Compound 7, TIF, CBI to Compound 3B, TIF, CBI.

At 1258, 7 Mar 06, Detainee [REDACTED] ISN [REDACTED] Bldg 5, Compound 3B, CBI, was interviewed by SA [REDACTED] and Mr [REDACTED] Detainee [REDACTED] related he woke up about 0839, and left the building. He related the brothers were still sleeping and he did not see what happened because he was at the mosque.

AGENT'S COMMENT: SA [REDACTED] was informed by the Entry Control Point personnel that Detainee [REDACTED] was the unelected leader of the compound and could easily intimidate other detainees. At 1310, 7 Mar 06, Detainee [REDACTED] was segregated from the other detainees and placed in an Isolation Box for the safety of any detainee who provided information.

About 1302, 7 Mar 06, SA [REDACTED] obtained a copy of the Military Police Blotter Report from Airmen [REDACTED] TIF Control, 886th Expeditionary Security Forces Squadron (ESFS), CBI, which revealed TIF Control logged Detainee [REDACTED] Detainee [REDACTED] [REDACTED] and Detainee DARAJ being moved at 2219, 6 Mar 06. (See Military Police Blotter, DA Form 3997, for details)

About 1310, 7 Mar 06, SA [REDACTED] coordinated with Airman [REDACTED] who searched through the electronic files at the TIF Control workstation which did not reveal any information as to when all three detainees were moved from Compound 4D to Compound 3B.

Between 1320-1340, 7 Mar 06, SA [REDACTED] reviewed the originals of all the detainee movement control documents which covered movements from 16 Jan 06 thru 28 Feb 06. No detainees were moved from Compound 4D to Compound 3B.

AGENT'S COMMENT: Detainee [REDACTED] stated when he was the Chief of Compound 4D; he helped the American guards remove bad detainees (NFI) from that compound. If a detainee was moved from Compound 4D to Compound 3B previously, this could identify a suspect who would have had a motive for hurting the three detainees.

Between 1340-1400, 7 Mar 06, SA [REDACTED] reviewed the originals of all the detainee movement control documents which covered movements from 21 Nov 06 thru 18 Dec 06. No detainees were moved from Compound 4D to Compound 3B. Airmen [REDACTED] could not locate any control

CPT **(b)(6), b(7)(C)** stated he is the individual who makes all the decisions on moving detainees between compounds. CP **(b)(6), b(7)(C)** stated he was the one who made the determination to move Detainee **(b)(6), b(7)(C)** Detainee **(b)(6), b(7)(C)** and Detainee DARAJ from compound 4D to compound 7 because he heard information they were trouble makers in that compound. CP **(b)(6), b(7)(C)** stated on 6 Mar 06 he conducted a check of the Detainee Information Management System which revealed all three detainees black listed for making of improvised explosive devices (IED'S). CPT **(b)(6), b(7)(C)** stated this is when he made the determination to move all three detainees from compound 7 to compound 3B because this is where the majority of the problem detainees are housed. CPT **(b)(6), b(7)(C)** stated all the detainees in compound 3B are Sunni's.

At 1436, 7 Mar 06, Detainee **(b)(6), b(7)(C)** IS **(b)(6), b(7)(C)** Bldg 1, Compound 3B, CBI, was interviewed by SA **(b)(6), b(7)(C)** and Mr. **(b)(6), b(7)(C)** Detainee **(b)(6), b(7)(C)** related he did not see anything and was sleeping at the time of the attack in building 5. A visual examination of Detainee **(b)(6), b(7)(C)** revealed a small puncture wound on the left hand. The wound appeared old not recent, and matched in size with a small dot on the center left side of his shirt. The dot on the shirt appeared at least over a day old and did not match the characteristics of someone involved in beating the brothers or carrying them. Detainee **(b)(6), b(7)(C)** related he sustained the puncture on a trash detail.

AGENT'S COMMENT: Detainee **(b)(6), b(7)(C)** was identified by the guards during the search because of the red blood dot.

At 1512, 7 Mar 06, SA **(b)(6), b(7)(C)** interviewed SSG **(b)(6), b(7)(C)** HHC, 785 MP Bn, CBI. SSG **(b)(6), b(7)(C)** related he spoke with the brothers at approximately 2200, 6 Mar 06, because they were refusing to go into the compound. When asked why they did not want to go in, they stated some of the detainees in the compound were of a different Muslim faction then them. There was no specific threat mention and the detainees were told they had to stay.

AGENT'S COMMENT: Most detainees do not want to go to new compounds when moved without their consent or request and one of the common excuses is that different factions of Muslims are in the camp.

When the guards transferred us to compound 3D, we refused to enter the compound. The guards forced us to go in the compound by telling us if you don't go in we will transfer you to compound 10C. We got inside the compound and put our clothes in building 6, and after half an hour they took our clothes to building 5. We felt that they did it on purpose. Then we left building 6 and sat in front of a building until the morning. When the sun came out we went to the compound chief and told him we did not sleep all night. We told the compound chief we do not have any problems with anybody and if they have a problem with us to tell us. The chief told us not to worry, to go to sleep and nothing will happen to us. We went to sleep in building 5 and around 0830 about 50 people entered the building started hitting us and shouting God is the greatest. Then we were transferred to the hospital.

Q: Did you see the faces of the people who were hitting you?

A: No.

Q: What weapons were you being hit with?

A: A metal tent pole that holds the tent, big knives, and pieces of a board.

Q: What did you hear them say while they were hitting you?

A: Shouting hit them on the head and Allah is the greatest.

Q: Do you know anyone in compound 3B?

A: Yes, my friend ^{b(6), b(7)(C)} he use to live in compound 4D but he asked to be transferred to compound 3B because his brother was there, but when he was transferred to 3B his brother was already released.

Q: Do you know anyone in compound 3B that was previously in 4D?

A: No.

Q: Do you know why the people in 3B wanted to hurt you or your brother?

A: Because I used to be a chief and they think I am a trader and their enemy.

Q: Did you hear any of the assailants say "why did you give them our number?"

A: No.

Q: Do you have anything else you want to add to this statement?

A: No.

CRIME SCENE EXAMINATION: Between 1011 and 1125, 7 Mar 06, SA **b(6), b(7)(C)** and SA **b(6), b(7)(C)** conducted a crime scene examination of Building 5, Compound 3B, TIF, CBI.

CHARACTERISTICS OF THE SCENE: Building 5 is a concrete, metal, and wood building located in the North East side of Compound 3B and was the fourth building on the South side of the compound. Building 5 is a one story building, approximately 20 feet wide and 60 feet long, and was used as a living area for numerous detainees. There were two main Entry/Exit ways (E/E) to the building. One E/E was centered in the North wall and one E/E was centered in the South wall of the building both were covered with a plastic tarp. There were sleeping pads on the floor with cardboard boxes and personal items lined and placed throughout the room. Building 5 is surrounded by building 6 to the West and the compound perimeter fence to the South, East, and North. Building 4 is located about 100 feet Northwest of building 5.

CONDITIONS OF THE SCENE: All the detainees were already gathered up and placed in the holding area. The compound was swept for any detainees still hiding and for safety reasons. It was unknown how much time passed from the time of the incident to the time the detainees were gathered. All personnel doing the sweep at the scene stepped through the outside area and the inside of the building. On approach to building 5 a blood smudge was found on the Southeast side corner of Building 6. The south side and the east side were littered with personal items and water jugs. A mattress with bloody clothing was laying about ten feet from the southwest corner of the building. Possible items used as weapons (broken wooden broom handles) were located on the East by Northeast corner of building 5 and under the AC unit on the North side. A bloody sock was located on the North by Northeast side of building 5 and a mattress and blanket with blood was found against the outside of the East wall of Building 5. Broken pieces of a broom handle with possible blood on them were found on the Southeast corner of Building 5 in a trash bag. It appeared the pieces were hastily thrown as the assailants departed, however an attempt to hide some of the broken wood in the trash was evident.

On the inside of the building the area was lived in but maintained in an organized way. There were 13 sleeping areas designated on the east and west side of the building with one mat laying on the center of the floor near the eight sleeping position. There were signs of blood near both entrance ways however most of the blood found was underneath the mattresses. There was blood found near the first sleeping area on the Southwest corner and under the mattress in the same area. There was blood also found in the area of the Northwest and Northeast corners with the larger concentration on the North side. The doorways had plastic covers for doors but they were kept partially pulled to the side for easy entrance. The buildings are not off limits to other

detainees and any detainee can sleep where ever he can find a spot to sleep. (See photos for details)

AGENT'S COMMENT: Due to the prolonged disruption of QRF and TIF operations and to speed up the process time no measurements were obtained. All evidence collected and documented was photographed to properly establish its location when found. It is unknown who moved the bloody items to the outside of the building and none of the detainees would admit having done so.

ENVIRONMENTAL CONDITIONS: At the time of the crime scene examination, the outside temperature was approximately 80 degrees Fahrenheit and the inside temperature was about 60 degrees Fahrenheit.

FACTORS PERTINENT TO ENTRY/EXIT: Access to the building could be gained through the North E/E and the South E/E. Access to Compound 3B could be gained through a gate (sally port) on the West side of the compound. The compound was enclosed by cyclone and concertina wire. Both E/E's had pieces of plastic which could be tied at both sides to prevent the wind from blowing through. The pieces of plastic were very thin and could be easily ripped down to include the pieces of string which tie it back to the door frame. When the crime scene examination was completed, both E/E's were not tied off and were easily moved out of the way to walk through.

SCENE DOCUMENTATION: SA **b(6), b(7)(C)** and TSGT **b(6), b(7)(C)** **b(6), b(7)(C)** 86th ESFS, A Company, CBI, exposed digital photographs of the crime scene. SA **b(6), b(7)(C)** completed a crime scene sketch. (See compact disk and crime scene sketch for details)

COLLECTION OF EVIDENCE: Between 1041 and 1142, 7 Mar 06, SA **b(6), b(7)(C)** and SA **b(6), b(7)(C)** collected and processed various materials and clothing with blood on them from inside and around building 5. Also collected were possible portions of the sticks used on the assault. (See Evidence/Property Custody Document (EPCD) for details)

AGENT'S COMMENT: The initial report indicated the detainees were stabbed, a subsequent search for the compound by the TIF guard force and CID did not identify any items used in the stabbing of the detainees. Subsequent notification that the detainees were beaten with possible sticks and pipes did not identify any other items.

DETAILS

SUMMARY OF SIGNIFICANT INFO: Detainee **b(6), b(7)(C)** stated in his first interview that he was afraid to go to sleep in caravan 5 because he thought he was going to get hurt if they went to sleep. He stated his brothers and him heard other detainees talking, stating they were traitors because they were cooperating with Americans. Detainee **b(6), b(7)(C)** in his second interview stated he told the guards he was afraid to go into the compound because the compound was all Takfiri. He stated when he went into the compound he heard another detainee say he use to be a chief in another compound and to get ready.

Detainee **b(6), b(7)(C)** stated in his first interview he did not want to go to sleep because his brothers and him overheard other detainees stating they were going to get hurt for cooperating with the American guards. In the second interview of Detainee **b(6), b(7)(C)** he stated he and his brothers stayed outside of caravan 8 in front of the guard shack, because they felt something was going to happen to them, then he stated he and his brothers were sitting outside the guard shack because they were upset about being moved to a new compound. Both Detainee **b(6), b(7)(C)** and Detainee **b(6), b(7)(C)** stories changed during their interviews, it is obvious they were afraid but will not cooperate and tell who hurt them. Both Detainee **b(6), b(7)(C)** and Detainee **b(6), b(7)(C)** stated they were moved from building (3 or 6) and placed in building 5, it is unknown if planning was involved or if they were moved because the previous building was full.

About 1530, 20 Mar 06, SA **b(6), b(7)(C)** was advised by SSG **b(6), b(7)(C)** 785th Military Police Battalion (MP BN), Headquarters Headquarters Company (HHC), Criminal Intelligence (CI), TIF, CBI, he received information about this case from Detainee **b(6), b(7)(C)** **b(6), b(7)(C)** ISN **b(6), b(7)(C)** Compound 3B, TIF, CBI. SSG **b(6), b(7)(C)** stated he obtained four ISN numbers from Detainee **b(6), b(7)(C)** who told him the four detainees' were involved in beating the three brothers. He stated the detainee's involved were Detainee **b(6), b(7)(C)** **b(6), b(7)(C)** ISN **b(6), b(7)(C)** Compound 3B, TIF, CBI, Detainee **b(6), b(7)(C)** **b(6), b(7)(C)** ISN **b(6), b(7)(C)** Compound 3B, TIF, CBI, Detainee **b(6), b(7)(C)** ISN **b(6), b(7)(C)** Compound 3B, TIF, CBI, and Detainee **b(6), b(7)(C)** ISN **b(6), b(7)(C)** Compound 3B, TIF, CBI.

About 0955, 21 Mar 06, SA **b(6), b(7)(C)** and Mr. **b(6), b(7)(C)** interviewed Detainee **b(6), b(7)(C)** **b(6), b(7)(C)** who stated he lived in Compound 3B when Detainee DARAJ, Detainee **b(6), b(7)(C)** **b(6), b(7)(C)** and Detainee **b(6), b(7)(C)** the three brothers who were assaulted. He stated on 6 Mar 06, when the three brothers were brought to Compound 3B he heard other detainees (NFI) in the compound say the three brothers were from Compound 4 and were spies. He stated the detainees who were talking about the three brothers were Takfiri. Detainee **b(6), b(7)(C)** stated he heard Detainee **b(6), b(7)(C)** tell the three brothers they did not want to come into the compound because there were Takfiri in the compound. On 6-Mar-2006, the 3 brothers came to the compound and stood in the head counting area. They refused to enter the compound because they said they have enemies here, and when we asked them who your enemies are, they didn't mention any names. The guards forced them to enter the compound. I asked them which building they were going to stay in, and they said they were going to building 6. The people in building 6 said their building was full, and then I took them to building 5. I went to sleep in building 5, but I didn't see the 3 brothers in building 5 when I went to sleep. I woke up in the morning to go to Morning Prayer, then to head counting, then back to building 5 to sleep. After Morning Prayer I went to receive breakfast, and then I went to take a shower while the 3 brothers were sleeping in building 5. After I took a shower I went to the Mosque to pray, then I saw people carrying the 3 brothers, and I went to see what was happening. After the incident I went to visitation and when I came back they put me in the box and they came to talk to me about the incident.

Q: When you asked what happened what were you told?

The day the brothers came to the compound, they refused to enter the compound. 3 detainees came into the compound from the main entrance. The chief welcomed them and tried to take them inside the compound. When they were at the second door of the head counting area they saw something they didn't like. I don't know what they saw. The 3 detainees went back to the compounds main entrance in the head counting area and told the guard that they did not want to be in this compound. They told the person with no name tag that they didn't want to transfer to this compound. Then they said they transferred us to this compound because they said were Takfiri, and then they said they have tribal problems. The person with no name tag told them if you don't enter the compound I will put you in isolation. They told him it was ok to put them in isolation, they didn't want to stay in this compound because it was a matter of life and death. The person with no name tag told them you have 2 choices, first you can stay in this compound or you can be transferred to compound 10. They said they would stay in this compound. The chief told me that we should pull guard duty all night to make sure no problems occur. In the morning we went to head counting and after head counting we went to sleep in the caravan. I woke up for breakfast and after breakfast I sat next to caravan 8 facing the guard's shack waiting for the medic to do sick call. After a while I saw a couple of detainees carrying a man in a blanket and the man in the blanket was saying "my brothers". The guard told me go wake up the chief, but somebody else woke up the chief. The guard told me to close the head counting second door, another guard named (b)(6), (b)(7)(C) asked a couple of detainees to bring his brothers because he's calling for his brothers. The detainees brought his brothers to the head counting area; the medic arrived with an Arabic man. One of the American doctors told me ask the detainee for his age, I asked him for his age and he told me 11, the doctor told me ask him again, I asked him again and he told me 12. They took the 3 injured detainees outside the compound.

Q: Do you know who the brothers are afraid of?

A: I don't know.

Q: When the brothers came into the compound did you hear anyone talking about them?

A: No.

Q: After the brothers were attacked did you hear anyone talking about who attacked them?

A: No.

Q: At anytime since the incident have you heard anyone talk about the attack on the three brothers?

A: The detainees said they got hit, but they don't know who hit them.

Q: When the brothers were attacked did you hear any commotion?

A: I didn't hear any noises because caravan 5 is far from me.

Q: After the brothers were attacked did you see anyone with blood on their clothes?

A: No.

Q: Did you ever see anyone washing blood out of their clothes?

A: No.

Q: Did the chief help carry one of the brothers to the holding area?

A: I didn't see.

Q: Are you friends with the chief?

A: No, I am a translator and he's the chief.

Q: Do you know if the attack on the brothers was planned?

AGENT'S INVESTIGATIVE REPORT <i>CID Regulation 195-1</i>	ROI NUMBER 0051-06-CID789
	Page 1 of 1 pages

BASIS FOR INVESTIGATION:
 About 1252, 17 Mar 06, this office received a Request For Assistance from the 21ST Military Police Detachment (CID), Camp Bucca, Iraq, APO AE 09375 to interview Detainee **b(6), b(7)(C)** Internment Serial Number (ISN) **b(6), b(7)(C)** as well as obtain finger prints and a blood sample if possible.

About 1016, 18 Mar 06, SA **b(6), b(7)(C)** with the assistance of **b(6), b(7)(C)** Interpreter, Titan Corp, interviewed DARAJ. DARAJ was able to tell SA **b(6), b(7)(C)** who he was as well as who his brothers were but did not know where he was or where he had been staying. DARAJ could not remember the assault on him and his brothers and at times made indecipherable comments as they were not in English or Arabic.

AGENTS COMMENT: DARAJ was physically and mentally incapable of carrying on a full conversation with SA **b(6), b(7)(C)** SA **b(6), b(7)(C)** was also unable to obtain fingerprints at the time of the interview as DARAJ would not remain still and SA **b(6), b(7)(C)** did not want to cause any undue stress that would complicate his condition.

About 1045, 21 Mar 06, SA **b(6), b(7)(C)** coordinated with the 344TH Field Medical Hospital, BCCF, AGI and obtained a blood sample from Detainee DARAJ.

AGENTS COMMENT: SA **b(6), b(7)(C)** was unable to obtain fingerprints as numerous medical staff were trying to stabilize DARAJ as they were prepping him for an emergency flight to the 322ND Field Medical Hospital located in Balad, Iraq.

About 1530, 21 Mar 06, SA **b(6), b(7)(C)** transferred the blood sample obtained from DARAJ to SA **b(6), b(7)(C)** 76TH MP DET (CID), Camp Slayer, Iraq, APO AE 09342 to have it delivered to the evidence custodian.

STATUS: This investigation is closed in the files of this office. All requested investigative activity has been completed. ///Last Entry///

About 1740, 21 Mar 06, SA [REDACTED] interviewed CPT [REDACTED] Intensive Care Unit (ICU), Registered Nurse (RN), 332nd Emergency Medical Expeditionary Group (EMDG), Logistical Support Area Anaconda, Balad, Iraq APO AE 09391 (LSAA), who stated Mr. DARAJ arrived at the hospital at approximately 1400, 21 Mar 06, and was currently being treated for meningitis. CPT [REDACTED] related Mr. DARAJ'S other injuries were treated on 13 Mar 06, when he was there previously. Furthermore, CPT [REDACTED] stated Mr. DARAJ would remain there for approximately one week.

About 1545, 25 Mar 06, SA [REDACTED] obtained record fingerprints from Mr. DARAJ.

AGENT'S COMMENT: Major Case Prints were not attainable as Mr. DARAJ'S hands were not manipulatable enough for suitable prints due to various monitoring devices affixed to him, and his positioning within the hospital bed.

About 1430, 26 Mar 06, SA [REDACTED] re-interviewed CPT [REDACTED] who stated he noticed a decline in the health of Mr. DARAJ yesterday evening and gave notice to the on-call physician MAJ [REDACTED] Chief of Medical Staff, 332nd EMDG, LSAA, who told him to continue monitoring him and to notify him when he died. CPT [REDACTED] related Mr. DARAJ died at approximately 1310, 26 Mar 06, at which time he notified MAJ [REDACTED] CPT [REDACTED] related MAJ [REDACTED] checked Mr. DARAJ'S vitals and pronounced him dead at 1313, 26 Mar 06.

About 1500, 26 Mar 06, SA [REDACTED] interviewed MAJ [REDACTED] who stated Mr. DARAJ received a Computed Axial Tomography (CAT Scan) on 25 Mar 06, which showed injury to three quarters of his brain. MAJ [REDACTED] related after Mr. DARAJ was treated for meningitis; the CAT scan following the procedure looked relatively good. MAJ [REDACTED] stated Mr. DARAJ suffered from a brain infarction which caused the majority of his brain tissue to die. MAJ [REDACTED] related he was unsure as to the reason for the rapid onset of the infarction; however, it was most likely due to the meningitis. MAJ [REDACTED] stated when he saw the most recent CAT scan; he determined Mr. DARAJ'S chances of surviving were very low. MAJ [REDACTED] stated an ethics committee was formed with the local physicians and surgeons of the hospital, and a Do Not Resuscitate (DNR) determination was made regarding Mr. DARAJ. MAJ [REDACTED] related this determination was made so as to not prolong the inevitable death of Mr. DARAJ. MAJ [REDACTED] further related coordination was made with COL [REDACTED] Chief of Medical Staff, Abu Ghraib, NFI, who concurred with their decision.

About 1645, 26 Mar 06, SA [REDACTED] coordinated with SGT [REDACTED] Non-Commissioned Officer-in-Charge (NCOIC), 311TH Quartermaster Company, Mortuary Affairs, LSAA and obtained major case prints and post-mortem photographs of Mr. DARAJ.

HPI / MECHANISM & PATTERN OF INJURY:

Iraqi EPW A/E from Abu Ghraib for further work-up of depressed mental status/R/O meningitis. Pt recently underwent craniectomy here at AFTH due to depressed skull fx 13 Mar 06. On presentation, intubated and sedated; moved all four extremities; stable cardiopulmonary function with HR 70-80s and SBP 130s. Scalp incision intact; abd wound also intact without apparent infection. CT head with moderate hydrocephalus. Plan--admit to ICU; IV abx; neurosurg eval; ventriculostomy placement.

HOSPITAL / OPERATIVE COURSE:

PROCEDURE HX 21 March - PROCEDURE NOTE: Patient as above. Presents GCS7T with pupils OS-3-2mm and OD 3mm NR. CT head: Massive Hydrocephallus without evidence of abscess. Left frontal ventriculostomy placed via single pass under aseptic technique to depth of 7cm. ICP 12-15. CSF clear to yellow in color. Sterile dressing placed. CSF sent for studies, gram stain demonstrated gnr. Pt placed on meropenem/amikacin/vanco. Will check CSF and CT head tomorrow.

ICU day 2 for patient s/p decompressive craniectomy, CSF consistent w/ GNR meningitis. CSF: gluc <10, prot 140, 913 WBC, 117 RBC, gram stain GNR. Sensitivities pending. Fever curve responding to Vanc, Meropenam, Amikacin. Hold on intrathecal AG for now. Repeating CT head. Continue support on vent in ICU.

ICU Day 3: ACB SENS TO CEFTAZ. Change abx to CEFTAZ. WAKE UP TODAY

ICU day 4 for patient s/p decompressive craniectomy, now w/ GNR meningitis. ACB SENS TO CEFTAZ. PT WITH HICCUPS ON VENT, SOMEWHAT DIFFICULT TO WEAN. PLAN TO CHECK DILANTIN LEVEL. WILL START REGLAN FOR SUSPICION OF TF IN OG TUBE DESPITE DHT IN PROX DUODENEM.

ICU day 5: Pt. not improving as expected. Repeated head CT HEAD THIS AM SHOWS BIHEMISPHERIC ISCHEMIC INFARCTS. NS STATES PROGNOSIS DISMAL. PLAN TO HOLD ETHICS MEETING TO STOP CARE.

ICU Day 6 - s/p neurotrauma and acinetobacter meningitis with CT yesterday demonstrating multiple large vessel infarcts vs embolic lesions causing watershed infarcts of most of his brain. Injury not compatible with life. Ethics consult yesterday approved withdrawal of care. Pt. extubated and expectant at this time. Has agonal respirations and is appears comfortable.

26 Mar 06: Death Note: Called to see patient by nurse. No electrical activity on cardiac monitor. No visible or audible breath sounds. No heart tones. No response to any stimuli. Time of death: 13:13. Cause of death: multiple intracranial infarcts.

ACTIVE MEDICAL ISSUES:

Patient died of multiple intracranial infarcts that in effect stroked $\frac{3}{4}$ of his brain. Exact etiology of these infarcts is unclear. Most likely a vasculitis related to the infection, but could be autoimmune (less likely) or embolic (less likely - no other evidence of embolic phenomenon anywhere else). This was deemed not compatible with life, and procedures were followed to withdraw care.

MEMORANDUM FOR THE RECORD

FROM: (b)(6)

SUBJECT: Committee for Bioethics

1. MEETING: An ad hoc ethics committee was called at the request of the critical care consultants and the chief of traum to discuss withdrawal of care from patient (b)(6)

2. MEMBERS PRESENT: (b)(6)

3. DISCUSSION:
The committee heard a summary of the patient's case from (b)(6) and (b)(6), from the neurosurgery service with input from (b)(6), an ID expert. In sum, this patient suffered from cranial trauma that was initially stabilized here with craniotomy. He was transferred to Abu and continued to improve. However, on 21 March, was transferred back for neurosurgical consultation after a worsening in his mental status. Initial CT showed hydrocephalus and work-up revealed an *Acinetobacter humanii* meningitis. Therapy included IV antibiotics and ventriculostomy placement. The patient continued to deteriorate from a neurological standpoint. Repeat CT on 25 March revealed multiple, bi-hemispheric infarcts. It is unclear if the etiology of these diffuse large vessel infarcts is infectious, thrombotic, or vasculitic. The prognosis for the multi-drug resistant acinetobacter meningitis is poor in and of itself; however, even if he survives this current infection, his prognosis from the infarcts is dismal, as nearly 75% of his brain shows evidence of damage. Given his dismal prognosis, continued worsening clinical picture, and no evidence of meaningful neurological activity it was recommended by (b)(6) that the critical care team withdraw care on this patient. No one presented offered a dissenting opinion.

4. CONCLUSION:
1. The recommendation from the committee is for the withdrawal of care today.
 2. (b)(6) recommended that the minutes from this committee be sent to Abu Ghraib for notification given the patient's EPW status prior to the withdrawal of care.

MEMORANDUM FOR RECORD

SUBJECT: Transfer Medical Summary – Hospital Record (b)(6)

DOA: 11 Mar 2006

DOD: 21 March 2006

Diagnoses/Procedures:

1. Depressed skull fracture
2. SDH, intraparenchymal bleed s/p decompressive craniectomy
3. Complex scalp laceration with scalp necrosis
4. Meningitis/cerebritis
5. Intubated 21 Mar for airway control

Medications:

1. Vancomycin
2. Ceftazidime

Diet: NPO

Activity: Bedrest

Hospital summary:

This is a young man who sustained a severe CHI after an assault at camp Bucca. He was transferred to Abu Ghraib for HCT which showed large SDH and intraparenchymal bleed with a depressed skull fracture. He was transferred to your facility and underwent decompressive craniectomy with good results. On transfer back to Abu Ghraib he was noted to have a segment of scalp necrosis in the post parietal/occipital region. Subsequently he was confused but awake, GCS 15, taking a diet and participating in his care. Approximately 5 days ago he began to have fevers. Lethargy and vomiting. A repeat HCT showed resolving injury, no hydrocephalus, and small amount of air under the scalp. The clinical picture was consistent with early meningitis/cerebritis and ceftriaxone was started. He had fevers through the ceftriaxone, and this was changed to vanco/ceftaz 3 days ago.

This morning the patient was minimally responsive and had a fever to 103 degrees. Blood ctx from three days ago are negative. Urine dip is negative and a CXR

I am concerned about ongoing CNS infection. We have exhausted our capabilities, and I am transferring him in the hope that you may have something else to offer in the diagnosis/management for whatever process is causing his deterioration.

Thank you for your assistance with this patient. Please contact me with any questions or concerns

Nucleated Cells	176	156	166	2	10 36 81	913

Calculation for Kova Method: $\frac{\text{Average side 1 \& 2} \times 1.1 \text{ (if stain used)} \times \text{Dilution} \times 90}{\text{\# of squares counted}} = \text{COUNT}$

Note: All bloody body fluids that are not clotted or too viscous for testing may be run on the cell counter for the RBC count. The RBC count must be $\geq .05$ in order for the count to be used. If it does not meet the criteria, then RBC count must be performed by dilution. The final count on cell counter is multiplied by 1,000,000 (move 6 decimal points).

S = Susceptible
 I = Intermediate
 R = Resistant
 MIC = mcg/ml (mg/L)
 N/R = Not Reported
 — = Not Tested
 TFG = Thymidine-dependent strain
 Blank = Data not available, or drug not advisable or tested
 ESBL = Extended spectrum beta-lactamase
 Blac = Beta-lactamase positive
 R* = Resistance due to extended spectrum beta-lactamases (ESBL)
 EBL? = Suspected ESBL. Confirmatory tests needed to differentiate ESBL from other beta-lactamases.
 IB = Inducible Beta-lactamase. Appears in place of "Susceptible" with species known to possess inducible beta-lactamases; potentially they may become resistant to all beta-lactam drugs.
 Monitoring of patients during/after therapy is recommended.

For blood and CSF isolates, a beta-lactamase test is recommended for Enterococcus species.

- (a) Use maximum doses of drug with an aminoglycoside for P. aeruginosa in patients with granulocytopenia or serious infections.
- (b) Breakpoints based on parenteral dose. The cefuroxime axetil (PO) breakpoints for Enterobacteriaceae and staphylococci are <8=S, 8-16=I, >16=R, and for S. pneumoniae are <2=S, 2=I, >2=R.
- (c) Refer to the penicillin interpretation when an interpretation is not reported for streptococci.
- (d) Refer to the penicillin interpretation for non beta-lactamase producing enterococci.
- (e) Breakpoints are based on S. pneumoniae isolated from patients with meningitis. Breakpoints are <2=S, 2=I, >2=R for non-meningitis infections.

Interpretive breakpoints are based on NCCLS M100-S14 Jan 2004. Sparfloxacin (for Gram negative isolates) and moxifloxacin are based on FDA approved breakpoints.

Detainee **b(6), b(7)(C)** began to cry and stated he did not have any more information to help. Detainee **b(6), b(7)(C)** stated he wished he could tell us who did this so they could be punished, but he was not able to see them because he was sleeping when they began to hurt him and his brothers. Detainee **b(6), b(7)(C)** did not have anything to add.

AGENT'S COMMENT: SA **b(6), b(7)(C)** coordinate with the TIF to have more guards present when Detainee **b(6), b(7)(C)** was informed his brother had passed away. When these men came to the compound they got everybody's attention because they refused to come into the compound and that doesn't normally happen. They stayed in the head counting area talking to the American, the chief, and the interpreter. Like any other day I go to bed between 2230 and 2300. I woke up really early in the morning for head counting and after head counting I ate breakfast with my friends, then I went back to sleep. I woke up because I heard them saying head count, I asked why we were having head count again, and they said an incident happened inside the compound. After that I heard people saying it was a family problem. That is my statement.

Q: Do you know the name of the three detainees who were transferred into compound 3B that night?

A: No.

Q: Did you hurt the three brothers?

A: No.

Q: Do you have any information about who may have hurt the three brothers?

A: No.

Q: Do you know what time the three brothers were attacked?

A: Between 0800 and 1100.

Q: Where were you during this time?

A: I was sleeping in caravan 7.

Q: Did you see the three brothers after they were assaulted?

A: No because they took them to the hospital before I went to head count.

Q: How did you find out the three brothers had been assaulted?

A: When I asked why we were having a head count the people in the compound told me the 3 men that came yesterday were attacked.

Q: Did you have any problems with the three brothers?

A: No because I don't know them, and I never saw them before.

Q: Do you think any of the three brothers were providing information to American Forces?

A: I don't think so.

Q: What do you think should happen to someone who provides information to American Forces?

A: If he gives them truthful information nothing should happen to him, but if he gives them wrong information they should extend his stay in jail.

Q: Do you know if the compound chief or the service chief was involved in assaulting the three brothers?

A: No because they are good people.

Q: Did you have any jobs or duties in compound 3B?

A: No duties in compound 3B.

Q: Were you friends with the service chief Faisal?

A: He is not my good friend but every time I see him or he sees me I say hi.

Q: Have you ever used the broom with the blue handle?

A: I don't remember if I touched it.

Q: Have you ever used the wooden stick to pick up trash?

A: No I never used it.

EXTERNAL EXAMINATION

The body is that of a well-developed, thin appearing male. The body weighs 133 pounds, is 68 inches in length and appears compatible with the reported age of 25 years. The body temperature is cool after refrigeration. Rigor is present to an equal degree in all extremities. Lividity is fixed and present predominately on the posterior surfaces of the body, except in areas exposed to pressure.

The scalp hair is black. A 15 inch curvilinear stapled incision extends from the left frontal region posteriorly through the right occipital region to the left temporal region, terminating just anterior to the left external ear. Facial hair consists of a black beard. The irides are brown. The corneae are cloudy. The conjunctivae are unremarkable. The sclerae are white. The external auditory canals, external nares and oral cavity are free of foreign material and abnormal secretions. The nasal skeleton is palpably intact. The teeth appear natural and in fair condition.

The neck is straight, and the trachea is midline and mobile. The chest is symmetric. No evidence of injury of the ribs or the sternum is evident externally. The abdomen is flat. A healing 5 inch vertical incision is present on the right side of the abdomen. The fingernails are intact. The extremities show evidence of injury to be described below. A 1 ¼ x 1 ¼ inch tattoo depicting unknown symbols is present on the lateral surface of the right upper arm. Multiple scars are present on the posterior surface of the left elbow (area 4 ½ x 2 inches) and the dorsal surface of the left hand (2 ¾ x 2 inches). The external genitalia are those of a normal adult male. The posterior torso is without note. The buttocks and anus are unremarkable.

EVIDENCE OF INJURY

Head and neck:

A healing, sutured 1 inch laceration is present in the right temporal region (posterior to right external ear) of the scalp. A healing 1 ½ inch laceration is present in the left parietal region of the scalp. There are multiple, healing confluent lacerations in the left occipital region of the scalp covering an area measuring 1 ¼ x 1 inch. There are multiple healing, sutured lacerations in the central vertex occipital region of the scalp, covering an area measuring 4 ½ x 2 ¼ inches. A linear 1 inch abrasion is on the left lateral surface of the neck. Internal examination reveals a left-sided subacute subdural hematoma.

Torso:

A ½ inch abrasion is present on the posterior surface of the left shoulder. There are multiple irregular healing lesions on the upper and lower back ranging in size from 1/8 to ¾ inch. Internal examination shows focal intramuscular and subcutaneous hemorrhage in the right upper chest and infraclavicular regions. There is hemorrhage in the region of the right spermatic cord.

Extremities:

There are multiple healing abrasions and sutured lacerations on the dorsal surface of the left upper arm and forearm covering an area measuring 2 ½ x 1 inch, ranging in size from 1/8 to ½ inch. dorsal surface of the left hand and index finger ranging in size from 1/16 to 3/16 inch. A focal 1/4 inch subcutaneous hematoma is present on the palmar surface of the left middle finger. Incision of the left wrist reveals focal subcutaneous hemorrhage in the ulnar region. There is a 6 x 3 inch discontinuous contusion on the anterior surface of the right lower leg. There are two healing lacerations on the medial surface of the left lower leg and the medial surface of the left ankle (1/4 inch each).

(See above "Evidence of Medical Therapy" and "Evidence of Injury")

The staples are removed and the entire scalp is reflected. The posterior portion of the surgical flap (approximately 2 3/4 x 2 inches) is dark and appears devitalized. The remaining calvarium is removed. The 1720 gm brain is placed in fixative pending consultative review. No skull fractures are noted. The atlanto-occipital joint is stable.

NECK:

The anterior strap muscles of the neck are homogenous and red-brown, without hemorrhage. The thyroid cartilage and hyoid are intact. The larynx is lined by intact white mucosa. The thyroid is symmetric and red-brown, without cystic or nodular change. The tongue is free of bite marks, hemorrhage, or other injuries.

BODY CAVITIES:

The ribs, sternum, and vertebral bodies are visibly and palpably intact. No excess fluid is in the pericardial, pleural or peritoneal cavities. The organs occupy their usual anatomic positions. There is no internal evidence of blunt force or penetrating injury to the thoraco-abdominal region.

RESPIRATORY SYSTEM:

The right and left lungs weigh 860 gm and 740 gm, respectively. The external surfaces are smooth and deep red-purple. The pulmonary parenchyma is moderately congested and edematous. No mass lesions or areas of consolidation are present.

CARDIOVASCULAR SYSTEM:

The 460 gm heart is contained in an intact pericardial sac. The epicardial surface is smooth, with minimal fat investment. The coronary arteries arise normally, follow the usual distribution and are

widely patent, without evidence of significant atherosclerosis or thrombosis. The myocardium is homogenous, red-brown, and firm; the atrial and ventricular septa are intact. The aorta gives rise to three intact and patent arch vessels. The vena cava and its major tributaries return to the heart in the usual distribution. The renal and mesenteric vessels are unremarkable.

LIVER & BILIARY SYSTEM:

The 1620 gm liver has an intact, smooth capsule and a sharp anterior border. The parenchyma is tan-brown and congested, with the usual lobular architecture. No mass lesions or other abnormalities are seen. The gallbladder contains approximately 5 ml of green-black bile and no stones. The mucosal surface is green and velvety. The extrahepatic biliary tree is patent.

SPLEEN:

The 170 gm spleen has a smooth, intact, red-purple capsule. The parenchyma is maroon and congested, with distinct Malpighian corpuscles.

PANCREAS:

The pancreas is firm and yellow-tan, with the usual lobular architecture. No mass lesions or other abnormalities are seen.

ADRENALS GLANDS:

The right and left adrenal glands are symmetric, with bright yellow cortices and grey medullae. No masses or areas of hemorrhage are identified.

GENITOURINARY SYSTEM:

The right and left kidneys weigh 170 gm and 160 gm, respectively. The external surfaces are intact and smooth. The cut surfaces are red-tan and congested, with uniformly thick cortices and sharp corticomedullary junctions. The pelves are unremarkable and the ureters are normal in course and caliber. Tan bladder mucosa overlies an intact bladder wall. The bladder is empty. The urine collection bag contains 200 ml of cloudy yellow urine. The prostate is normal in size, with lobular, yellow-tan parenchyma. The seminal vesicles are unremarkable. The testes are free of mass lesions, contusions, or other abnormalities.

GASTROINTESTINAL TRACT:

The esophagus is intact and lined by smooth, grey-white mucosa. The stomach contains approximately 250 ml of dark green liquid material. The gastric wall is intact. The duodenum, loops of small bowel, colon and appendix are unremarkable.

MUSCULOSKELETAL SYSTEM:

Muscle development is normal. No bone or joint abnormalities are noted.

CONSULTATIVE REPORT

Neuropathology Consultation:

The dura is remarkable for adherent surgical material and blood clot in the left frontoparietal region; two additional foci of subdural hemorrhage are noted in the right parietal region. Thick purulent

exudates are identified on the surfaces of the cerebral hemispheres, on the basilar surface of the cerebrum, on the ventral surface of the midbrain and on the cerebellar vermis. A 1.5 x 1 cm soft area associated with an overlying purulent exudate is noted in the inferior left temporal lobe. Both cerebral hemispheres exhibit diffuse gyral flattening and sulcal narrowing. A 3.2 x 3 cm area of contusion and laceration is identified in the left superior parietal lobe. A similar 3 x 3 cm lesion is present in the lateral left occipital lobe. A white plastic catheter, 0.3 cm in diameter, is identified in the left middle frontal gyrus. The circle of Willis has a normal adult configuration without aneurysms, significant atherosclerosis, or occlusions.

Coronal sections of the cerebrum show a cortical ribbon of normal thickness, well demarcated from subjacent white matter. There is a diffuse dusk discoloration of the cerebral cortex. The left parietal and occipital lobe contusions are confirmed; subjacent wedge-shaped hemorrhagic infarcts, extending up to 4 cm into the white matter, are associated with each contusion. The brain is edematous and soft. A slight right to left shift is identified that focally compresses the right ventricular system more than the left. Definite cingulate gyrus herniation is not identified. The ventricular system is filled with a purulent exudate with the left side containing more than the right. The shunt catheter is noted within the ventricular system. The basal ganglia, thalami, and hypothalamus are unremarkable. Other than the previously described purulent exudate, transverse sections of the cerebellum and brainstem are unremarkable. The substantia nigra and locus ceruleus are normally pigmented for age. The aqueduct is slit-like. The spinal cord is not submitted, but the uppermost cervical cord and cervicomedullary junction are unremarkable.

Microscopic sections of meninges demonstrate patchy acute and chronic inflammation with multifocal abscess formation; several leptomenigeal vessels have inflammatory cells within their walls, consistent with a secondary vasculitis. Foci of hemorrhage, surgical material, and granulation tissue are also noted in the leptomeninges. Extensive perivascular and parenchymal acute/chronic inflammation and gliosis are present in several regions of the cerebrum. A large collection of neutrophils associated with necrosis is noted in the section from the left parietal periventricular region, consistent with early abscess formation. Special stains for microorganisms reveal a mixture of short gram-positive coccobacilli and acid-fast bacteria that are interpreted as contaminants. Multiple foci of rarefaction, vacuolation, lipid-and hemosiderin-laden macrophages, hypereosinophilic neurons, acute hemorrhage and subacute inflammation are identified, consistent with multifocal acute to subacute cerebral and pontine infarcts. Numerous hypereosinophilic neurons are identified in the cerebral cortex, deep gray matter, hippocampus, brainstem, and cerebellum consistent with diffuse acute hypoxic/ischemic neuronal injury. The subdural hemorrhage consists of intact and degenerating erythrocytes adjacent to the dura matter and a well-formed fibrous layer on the arachnoid side. Many pigment-laden macrophages are present. These changes are consistent with a subacute subdural hematoma.

In summary, the above changes are consistent with a subacute meningocerebroventriculitis with early abscess formation, subacute contusions in the left middle parietal and lateral occipital lobes, multifocal acute to subacute infarcts, diffuse acute hypoxic/ischemic neuronal injury, and a left subacute subdural hematoma; the subdural most likely occurred at the time of initial trauma with a secondary component occurring as a result of medical intervention.

RADIOLOGIC EXAMINATION

Full body radiographs are obtained revealing, in addition to above, fracture of the acromion of the right scapula. No evidence of non-therapeutic metallic foreign bodies is identified.

ADDITIONAL PROCEDURES

- Documentary photographs are taken by the OAFME staff photographers.
- Specimens retained for toxicologic testing and/or DNA identification are: blood, bile, gastric contents, urine, vitreous, lung, liver, kidney, spleen, adipose tissue and psoas muscle.
- Selected portions of organs are retained in formalin.
- Personal effects are released to the appropriate mortuary operations representatives.

OPINION

According to reports this 25 year old male detainee sustained a depressed skull fracture as the result of an assault by fellow inmates. During his hospitalization, he underwent a left-sided craniectomy for decompression followed by placement of an intraventricular catheter for subsequent hydrocephalus. His clinical course was complicated by gram negative meningitis and multiple cerebral infarcts. He ultimately succumbed to complications of his head injuries on his 13th hospital day. Postmortem toxicological examination showed only the presence of the therapeutic agents morphine (blood 0.63 mg/L), midazolam (blood 0.09 mg/L) and metoclopramide (detected in urine only). The manner of death is homicide.

This case was reviewed in consultation with Department of Neuropathology. Their written consultation is incorporated into the above report.

DRUGS: The **URINE** was screened for acetaminophen, amphetamine, antidepressants, antihistamines, barbiturates, benzodiazepines, cannabinoids, chloroquine, cocaine, dextromethorphan, lidocaine, narcotic analgesics, opiates, phencyclidine, phenothiazines, salicylates, sympathomimetic amines and verapamil by gas chromatography, color test or immunoassay. The following drugs were detected:

Positive Opiate: Morphine was detected in the urine by immunoassay and confirmed by gas chromatography/mass spectrometry. The blood contained 0.63 mg/L of morphine as quantitated by gas chromatography/mass spectrometry.
