MEMORANDUM FOR: SEE DISTRIBUTION

SUBJECT: CID REPORT OF INVESTIGATION - FINAL (C)/SSI - 0010-2008-CID789-53199 - 5H9A

DATES/TIMES/LOCATIONS OF OCCURRENCES:
1. 29 MAR 2008, 1348 - 29 MAR 2008, 1348; BED 4, INTENSIVE CARE UNIT, 31ST COMBAT SUPPORT HOSPITAL, CAMP CROPPER, BAGHDAD, IRAQ

DATE/TIME REPORTED: 29 MAR 2008, 1555

INVESTIGATED BY:
SA (b)(6), (b)(7)(C), (b)(7)(F)
SA

SUBJECT:
1. NONE, ; [DEATH BY NATURAL CAUSES] (NFI)

VICTIM:
1. MUHAMMED AL-ITHAWI, TAHA DAHER (DECEASED); FRCIV; IRAQ; (DOB); (POB); MALE; OTHER; CAMP REMEMBRANCE II, THEATER INTERNMENT FACILITY, CAMP CROPPER, BAGHDAD, IZ; XZ ; [DEATH BY NATURAL CAUSES]

INVESTIGATIVE SUMMARY:

This is an Operation Iraqi Freedom Investigation.

This office was notified by SGT (b)(6), (b)(7)(C) Patient Administration Division, 31st

Combat Support Hospital (CSH), Camp Cropper, IZ APO AE 09342 (CCIZ), of the death of Mr MUHAMMED Al-Ithawi while treated in the Intensive Care Unit (ICU), 31st CSH, CCIZ.

Investigation determined Mr. MUHAMMED was admitted to the 31st CSH on 16 Mar 08 for numerous physical ailments to include an acute myocardial infarction, untreated diabetes and acute renal failure. Mr. MUHAMMED's physical condition deteriorated until his death on 29 Mar 08. An autopsy conducted by the Office of the Armed Forces Medical Examiner (OAFME) revealed Mr. MUHAMMED's cause of death was hypertensive atherosclerotic cardiovascular disease and the manner of death was reported as natural. The results of this investigation were consistent with their findings.

AGENT'S INVESTIGATION REPORT

CID Regulation 195-1

ROI NUMBER: 0010-10-CID789-53199

DETAILS

BASIS FOR INVESTIGATION: About 1555, 29 Mar 08, SA [redacted] was notified by SGT [redacted] Patient Administrative Department (PAD), 31st Combat Support Hospital (CSH), Camp Cropper, Baghdad, Iraq APO AE 09342 (CCIZ), of the death of Mr Taha Daher MUHAMMED Al-Ithawi, Internment Serial Number (ISN): US9IZ-324305-CI, Camp Remembrance II (CRII), Theater Internment Facility (TIF), CCIZ, while in the Intensive Care Unit (ICU), 31st CSH, CCIZ.

About 1612, 29 Mar 08, SA [redacted] interviewed MAJ (Doctor) [redacted] Attending Physician, ICU, 31st CSH, CCIZ, who related Mr MUHAMMED was admitted to the ICU on 16 Mar 08 for numerous ailments, to include an acute myocardial infarction, untreated diabetes, and acute renal failure. Further, MAJ [redacted] stated Mr MUHAMMED was given an emergency surgery for a gastro intestinal bleed, which was remedied by the procedure, however; Mr MUHAMMED went into a state of cardiac arrest subsequent to the procedure. MAJ [redacted] reported lifesaving measures initiated by the medical personnel brought Mr MUHAMMED out of cardiac arrest and into a stable condition. Additionally, MAJ [redacted] advised Mr MUHAMMED was administered 20 units of blood, numerous intravenous solutions, pain medication and diuretics. MAJ [redacted] related Mr MUHAMMED was placed on a "do not resuscitate order" due to his deteriorating condition and no dialysis machine to treat Mr MUHAMMED's kidney failure. Subsequently, MAJ [redacted] stated on 29 Mar 08, Mr MUHAMMED went into a state of cardiac arrest, from which he did not recover. MAJ [redacted] pronounced Mr MUHAMMED dead at 1348, 29 Mar 08. Further, MAJ [redacted] preliminarily opined the cause of death was cardiac arrest and manner of death as natural.

About 0845, 12 Apr 08, SA [redacted] coordinated with SSG [redacted] PAD, 31st CSH, CCIZ, who provided all medical documentation concerning Mr MUHAMMED. A review of the records indicated Mr MUHAMMED was admitted to the ICU, 31st CSH on 16 Mar 08 for physical ailments to include myocardial infarction, untreated diabetes, and acute renal failure. Mr MUHAMMED's physical state deteriorated over the course of his treatment until his death on 29 Mar 08. ///LAST ENTRY///

MEDICAL RECORD | **CHRONOLOGICAL RECORD OF MEDICAL CARE**

DATE	SYMPTOMS, DIAGNOSIS, TREATMENT, TREATING ORGANIZATION *(Sign each entry)*
29 MARCH 08	Death Summary
1550	Pt had been suffering from progressive renal failure leading to acidosis and volume overload. He had also suffered from a recent acute myocardial infarction at his admission during a severe diabetic ketoacidosis state. After initial stabilization, he developed an upper GI bleed requiring 20 units of blood products + emergent X-lap. Pt had mallory-weiss injury repaired in OR. However, pt continued to have problems c progressive renal failure, coagulopathy, another acute myocardial infarction. He suffered from cardiac arrest in less 48 hrs responding to shock, later developing tachyarrhythmia's (PSVT) responding to Ca channel blockade. However, his renal function continued to deteriorate, he did not regain renal function + did not respond to diuresis after multiple attempts. Disease process had been discussed with pt yesterday, and he agreed to no resuscitative efforts. Today, he continued to have increased volume overload, min urine output w/o response to diuresis, pulmonary edema, and acidosis. Pt later suffered from cardiac arrest + was pronounced dead. Mrs Muhammed was present at bedside was managed with IV morphine, and his death appeared very peaceful.

DATE

22 JUNE 08 GS

9pm Pt was had substantial progressive clinical deterioration since his return from the OR.

Briefly - taken to OR today for continued UGI bleeding evidenced by bloody NGT aspirates w/ flushing Hct despite pRBC transfusion, plt transfusion, dDAVP, estrogen & no blood per rectum. No reasonable endoscopic options in theater. Findings in OR: clw Mallory Weiss tear; no gastric or duodenal ulcerations or evidence of ongoing bleeding. M-W tear overcam to the extent we could visualize the injury.

Postop - progressive decline in BP, Hct 27→20, no significant bloody return from NGT. INR now 1.7, plt 7.2 on heparin drip. Renal insufficiency worsening w/ Cr >5, K+ 6.9. Without endoscopy or angiography assist, further surgical exploration is not a feasible options & in my opinion constitutes futile care. After extensive clinical discussion w/ ICU staff (b)(6) & DCS (b)(6) we will continue resuscitative efforts to include: transfusion to a →

MEDICAL RECORD | **PROGRESS NOTES**

DATE	NOTES
28 MAR 07	ICU NOTE
	Pt had periods of PSVT yesterday with stable responses. To avoid confusion for a potentially reversible problem (tachy), DNR order was cancelled 1412 pm. Pt had PSVT 1612 pm, resulting in HBP → responded to vagal maneuvers + adenosine. 1615, pt developed sustained VT + VFib requiring DC shock x 1. This am, upon my exam, pt ~~barely~~ stable on pressors, but having episodes of PSVT (rates 150-160's) & sinus CP/tachy/HBP. Pt given dilt x 2 w/ min response duration → started on PO dilt @ small dose & 60mg Pt's BP's now 80's/40's after previous episodes of PSVT this am. Rates slow in 100-120's. Pt given 2UF boluses/drops & min response. Discussed w pt and interpreter that underlying heart dz, current arrhythmia/BP episode & VFib 1615 pm in setting of progressive renal failure (Cr >6, BUN 70's) w/o access to dialysis is a grave prognosis. I Doubt that resuscitative efforts in setting of CV compromise would anything other than prolonging his discomfort. Pt agreed to DNR/DNI status. Will do everything possible to keep pt comfortable + supportive care provided

AGENT'S INVESTIGATION REPORT

CID Regulation 195-1

ROI NUMBER
0010-08-CID789-53199

DETAILS

EXAMINATION OF REMAINS: About 1630, 29 Mar 08, (b)(6) conducted an examination of the remains of Mr Taha Daher MUHAMMED Al-Ithawi, Internment Serial Number (ISN): US9IZ-324305-CI, Camp Remembrance II (CRII), Theater Internment Facility (TIF), Camp Cropper, Baghdad, Iraq APO AE 09342 (CCIZ), located at Bed 4, Intensive Care Unit (ICU), 31st Combat Support Hospital (CSH), CCIZ.

Characteristics of Remains: The decedent was identified via retinal scan as Mr MUHAMMED. The decedent appeared to be Middle Eastern male, approximately 5'11", and weighed 222 pounds. The decedent had black/gray "peppered" hair and brown eyes. No tattoos were viewed, but a healing cut, sutured with staples was noted on the midsection of the decedent. The decedent was not clothed, but covered with a bed sheet upon arrival. Evidence of medical intervention included an intravenous lead in the left foot, a catheter inserted into the penis, numerous leads around the midsection, healing wounds in both arms of intravenous leads, and a scar measuring approximately 16" in the midsection, which was described as a wound from emergency surgery for a gastrointestinal bleed.

Conditions of Remains: The remains were still warm to the touch and rigor mortis was not present. Minor amounts of livor mortis was noted on the back of the decedent. No signs of external trauma, except for signs of medical intervention, were observed. The decedent was not wearing any jewelry.

Environmental Conditions: At the time of the examination, the temperature inside the ICU was 68 degrees. There were no odors out of the ordinary near the remains during the time of the examination.

Factors Pertinent to Entrance/Exit (E/E): The main entrance and exit point to the ICU could be gained from the southern most wall in the ICU. There was a set of double doors which could be accessed by pushing in either direction.

Documentation of Remains Documentation: The remains were documented by (b)(6) utilizing a NIKON D80 Digital SLR Camera with a built in flash. Additionally, a human remains sketch was prepared by (b)(6)

Search for Latent Impressions: There was no search for latent impressions due to all who worked in the ICU had unfettered access to Mr MUHAMMED.

Collection of Evidence: A collection of evidence was not performed due to the fact that the remains were located at the ICU for an hour prior to his demise and all clothing had been disposed of by hospital staff.

Search Beyond the Remains: A search beyond the scene was not conducted. ///Last Entry///

AGENT'S INVESTIGATION REPORT

CID Regulation 195-1

ROI NUMBER 0010-08-CID789-53199

PAGE 1 OF 1 PAGE

DETAILS

EXAMINATION OF REMAINS: About 1630, 29 Mar 08, SA [redacted] conducted an examination of the remains of Mr Taha Daher MUHAMMED Al-Ithawi, Internment Serial Number (ISN): US9IZ-324305-CI, Camp Remembrance II (CRII), Theater Internment Facility (TIF), Camp Cropper, Baghdad, Iraq APO AE 09342 (CCIZ), located at Bed 4, Intensive Care Unit (ICU), 31st Combat Support Hospital (CSH), CCIZ.

Characteristics of Remains: The decedent was identified via retinal scan as Mr MUHAMMED. The decedent appeared to be Middle Eastern male, approximately 5'11", and weighed 222 pounds. The decedent had black/gray "peppered" hair and brown eyes. No tattoos were viewed, but a healing cut, sutured with staples was noted on the midsection of the decedent. The decedent was not clothed, but covered with a bed sheet upon arrival. Evidence of medical intervention included an intravenous lead in the left foot, a catheter inserted into the penis, numerous leads around the midsection, healing wounds in both arms of intravenous leads, and a scar measuring approximately 16" in the midsection, which was described as a wound from emergency surgery for a gastrointestinal bleed.

Conditions of Remains: The remains were still warm to the touch and rigor mortis was not present. Minor amounts of livor mortis was noted on the back of the decedent. No signs of external trauma, except for signs of medical intervention, were observed. The decedent was not wearing any jewelry.

Environmental Conditions: At the time of the examination, the temperature inside the ICU was 68 degrees. There were no odors out of the ordinary near the remains during the time of the examination.

Factors Pertinent to Entrance/Exit (E/E): The main entrance and exit point to the ICU could be gained from the southern most wall in the ICU. There was a set of double doors which could be accessed by pushing in either direction.

Documentation of Remains: The remains were documented by SA [redacted] utilizing a NIKON D80 Digital SLR Camera with a built in flash. Additionally, a human remains sketch was prepared by SA [redacted]

Search for Latent Impressions: There was no search for latent impressions due to all who worked in the ICU had unfettered access to Mr MUHAMMED.

Collection of Evidence: A collection of evidence was not performed due to the fact that the remains were located at the ICU for an hour prior to his demise and all clothing had been disposed of by hospital staff.

Search Beyond the Remains: A search beyond the scene was not conducted. ///Last Entry///

AGENT'S INVESTIGATION REPORT

CID Regulation 195-1

ROI NUMBER 0080-08-CID112

PAGE 1 OF 1 PAGE

DETAILS

BASIS FOR INVESTIGATION: On 7 Apr 08, this office received a Request for Assistance (RFA) from SA (b)(6), (b)(7)(C) Special Agent-in-Charge, Camp Cropper, 20th/1149th MP DET (CID), 11MP BN (CID), Iraq APO AE 09342. The request required this office to attend the autopsy of Mr. Taha Daher MUHAMMED, US91Z-324305, Camp Remembrance II, Theater Internment Facility, Camp Cropper, Iraq APO AE 09342.

About 0925, 1 Apr 08, Dr. (LCDR) (b)(6), (b)(7)(C) Office of Armed Forces Medical Examiner (OFAME), Armed Forces Institute of Pathology (AFIP), 1413 Research Blvd, Bldg 102, Rockville, MD 20850, conducted the autopsy of Mr. MUHAMMED. The preliminary cause of death and the manner are pending further medical review. Photographs from AFIP exposed digital photographs of the autopsy and prepared a compact disc (CD) containing all images exposed.

About 1400, 9 Mar 08, SA (b)(6), (b)(7)(C) obtained the fingerprints of Mr. MUHAMMED and a copy of the CD containing all images. (See Fingerprints and CD of Mr. MUHAMMED for details.)

Agent's Comment: The official results of the autopsy will be documented in the Final Autopsy Report, which will be provided upon completion. //////////////////////LAST ENTRY//////////////////////

AUTOPSY EXAMINATION REPORT

Name: BTB Muhammed Al-Ithawi, Taha Daher
ISN: 324305
Date of Birth: Unknown
Date of Death: 29 Mar 2008
Date/Time of Autopsy: 1 Apr 2008@1130
Date of Report: 10 Apr 2008

Autopsy No.: (b)(6)
AFIP No. (b)(6)
Rank: Iraqi Civilian
Place of Death: Iraq
Place of Autopsy: Port Mortuary
Dover AFB, Dover, DE

Circumstances of Death: Per investigation, this Iraqi male was admitted to the 31st Combat Surgical Hospital on 16 March 2008 for multiple medical problems, including acute renal failure, untreated diabetes mellitus, and an acute myocardial infarction. While in the hospital he underwent surgery for gastrointestinal bleeding, and was also treated for continued renal failure and another myocardial infarction. Despite aggressive medical intervention, he eventually succumbed to his multiple ailments.

Authorization for Autopsy: Armed Forces Medical Examiner, per 10 U.S. Code 1471

Identification: Presumptive identification is established by examination of paperwork in the case file. Post-mortem fingerprints and a specimen suitable for DNA analysis are obtained. .

CAUSE OF DEATH: **Hypertensive atherosclerotic cardiovascular disease**

MANNER OF DEATH: **Natural**

AUTOPSY REPORT (b)(6)
Muhammed Al-Ithawi, Taha Daher

EXTERNAL EXAMINATION

The body is that of a well-developed, well-nourished unclad male. The body weighs 273 pounds and is 73 inches in length. The body is cold. Rigor is passing. Lividity is present and fixed on the posterior surface of the body, except in areas exposed to pressure. The head is normocephalic, and the scalp hair is black and gray. Facial hair consists of a beard and mustache. The irides are brown. The corneae are cloudy. The conjunctivae are congested. The sclerae are white/red. The eyelids are edematous. The external auditory canals, external nares and oral cavity are free of foreign material and abnormal secretions. The earlobes have creases bilaterally. The nasal skeleton and maxilla are palpably intact. The lips are without evident injury. The upper teeth are absent and the lower teeth are in poor condition. Examination of the neck reveals no evidence of injury. No evidence of injury of the ribs or the sternum is evident externally. The abdomen is soft and distended. There is a 10 ½ inch vertical stapled incision on the midline of the abdomen. The external genitalia are those of an adult circumcised male, and the scrotum and penis are edematous. There are numerous pinpoint pustules on the posterior torso. The anus is unremarkable. The extremities are diffusely edematous. The fingernails are short and intact. Underneath the wrap and gauze on the left foot is a necrotic ulcer, 2 x 2 inches, and the 1st and 2nd toes on the left foot are absent. Scars and tattoos are not noted.

CLOTHING AND PERSONAL EFFECTS

No items of clothing or personal effects accompany the body.

MEDICAL INTERVENTION

- EKG leads (5) on the torso
- Stapled incision, mid abdomen
- Foley catheter
- Triple-lumen catheter, right femoral area
- Wrap and gauze on left foot, labeled with "29 Mar 08 0930"

RADIOGRAPHS

A complete set of postmortem radiographs is obtained and demonstrates the medical intervention and natural disease as noted.

EVIDENCE OF INJURY

No significant injuries are identified.

INTERNAL EXAMINATION

BODY CAVITIES:

The body is opened by the usual thoraco-abdominal incision and the chest plate is removed. The ribs, sternum, and vertebral bodies are visibly and palpably intact. All body organs are present in normal anatomical position. There are dense left–sided pleural adhesions. There is 100 ml of serosanguinous fluid in the left pleural cavity. There is 1500 ml of serosanguinous fluid in the peritoneal cavity. The subcutaneous fat layer of the abdominal wall is 1 ½ inch thick.

HEAD AND CENTRAL NERVOUS SYSTEM:

The scalp is reflected. The galeal and subgaleal soft tissues of the scalp are free of injury. There are no skull fractures. The calvarium of the skull is removed. The dura mater and falx cerebri are intact. There is no epidural or subdural hemorrhage present. The leptomeninges are thin and delicate. The cerebral hemispheres are symmetrical. The structures at the base of the brain, including cranial nerves and blood vessels, are intact. Clear cerebrospinal fluid surrounds the 1410 gram brain, which has unremarkable gyri and sulci. Coronal sections through the cerebral hemispheres reveal no lesions. Transverse sections through the brain stem and cerebellum are unremarkable. The atlanto-occipital joint is stable.

NECK:

The anterior strap muscles of the neck are homogenous and red-brown, without hemorrhage. The thyroid cartilage and hyoid bone are intact. The larynx is lined by intact white mucosa. The tongue is free of bite marks, hemorrhage, or other injuries.

CARDIOVASCULAR SYSTEM:

The 660 gram heart is contained in an intact pericardial sac. The epicardial surface is smooth, with minimal fat investment. The coronary arteries are present in a normal distribution. They demonstrate the following amounts of atherosclerotic stenosis: approximately 95% of the proximal left anterior descending coronary artery, approximately 50% of the mid right coronary artery, and approximately 95% of the proximal and mid left circumflex coronary artery. The myocardium is homogenous, pale tan, and moderately firm. The valve leaflets are thin and mobile. The endocardium is smooth and glistening. The aorta gives rise to three intact and patent arch vessels, and demonstrates severe calcific change distally, which extends into the iliac arteries. The renal arteries demonstrate approximately 75% atherosclerotic stenosis bilaterally. The mesenteric vessels are unremarkable.

RESPIRATORY SYSTEM:

The upper airway is clear of debris and foreign material; the mucosal surfaces are smooth, yellow-tan and unremarkable. The right pleural surface is smooth and glistening; the left pleural surface is tan-white and fibrotic. The pulmonary parenchyma is diffusely congested and edematous, exuding large amounts of blood and frothy fluid; no focal lesions are noted. The pulmonary arteries are

normally developed, patent, and without thrombus or embolus. The right lung weighs 1090 grams; the left 1070 grams.

HEPATOBILIARY SYSTEM:

The 2330 gram liver has an intact smooth capsule covering tan-red moderately congested parenchyma with no focal lesions noted. The gallbladder is markedly distended and contains 50 ml of green-brown, mucoid bile; the mucosa is velvety and unremarkable. The extrahepatic biliary tree is patent, without evidence of calculi.

GASTROINTESTINAL SYSTEM:

The esophagus is lined by gray-white, smooth mucosa. The gastric mucosa is arranged in the usual rugal folds and the lumen contains approximately 500 ml of thick, yellow material. There is a 4 inch sutured incision on the mucosal surface of the distal stomach. The small bowel is unremarkable. The serosal surface of the large bowel is diffusely dark purple-gray. The pancreas has a pale tan lobulated appearance and the ducts are clear. The appendix is present.

GENITOURINARY SYSTEM:

The right kidney weighs 200 grams; the left 200 grams. The renal capsules are smooth and thin, semi-transparent and stripped with ease from the underlying granular, red-brown cortical surfaces. The cortex is sharply delineated from the medullary pyramids, which are red-purple to tan and unremarkable. The calyces, pelves and ureters are unremarkable. White bladder mucosa overlies an intact bladder wall. The bladder contains a catheter and is empty. The testes, prostate gland and seminal vesicles are without note.

LYMPHORETICULAR SYSTEM:

The 460 gram spleen has a smooth, intact capsule covering red-pale tan, moderately firm parenchyma; the lymphoid follicles are unremarkable. Lymph nodes in the hilar, periaortic and iliac regions are not enlarged.

ENDOCRINE SYSTEM:

The thyroid gland is symmetrically enlarged and red-brown, without cystic or nodular change. The right and left adrenal glands are symmetric, with bright yellow cortices and red-brown medullae. No masses or areas of hemorrhage are identified.

MUSCULOSKELETAL SYSTEM:

There are degenerative changes of the 6^{th} and 7^{th} cervical, and 9^{th}-12^{th} thoracic vertebral bodies (seen radiologically). No abnormalities of muscle are identified.

AUTOPSY REPORT (b)(6)
Muhammed Al-Ithawi, Taha Daher

ADDITIONAL PROCEDURES

1. Documentary photographs are taken by an OAFME staff photographer.
2. Specimens retained for toxicology testing and/or DNA identification are: vitreous fluid, blood, spleen, liver, lung, kidney, brain, myocardium, bile, gastric contents, adipose tissue and psoas muscle.
3. The dissected organs are forwarded with body.

MICROSCOPIC EXAMINATION

Selected portions of organs are retained in formalin, without preparation of histology slides.

AUTOPSY REPORT (b)(6)

Muhammed Al-Ithawi, Taha Daher

FINAL AUTOPSY DIAGNOSES:

I. Hypertensive atherosclerotic cardiovascular disease:
A. Near-occlusive atherosclerotic stenosis of the left anterior descending and left circumflex coronary arteries, and approximately 50% atherosclerotic stenosis of the right coronary artery
B. Atherosclerotic stenosis of the renal arteries, approximately 75% bilaterally
C. Diffuse calcific change of the distal aorta and iliac arteries
D. Cardiomegaly, 660 grams
E. Gross hypertensive changes of the kidneys

II. Additional findings:
A. Bilateral pulmonary congestion, right 1090 grams, left 1070 grams
B. Dense left-sided pleural adhesions
C. Left pleural cavity, 100 ml serosanguinous fluid
D. Peritoneal cavity, 1500 ml serosanguinous fluid
E. History of untreated diabetes mellitus, with a necrotic ulcer and missing digits on the left foot
F. History of upper gastrointestinal bleeding, with a stapled abdominal incision and a sutured gastric incision
G. Grossly necrotic large bowel
H. Diffusely enlarged thyroid with no focal lesions identified

III. No evidence of significant injury

IV. Evidence of Medical Intervention: As noted above

V. Identifying marks and tattoos: None noted.

VI. Postmortem Changes: As noted above

VII. Toxicology (AFIP):
A. Ethanol: No ethanol is detected in the blood and vitreous fluid.
B. Drugs: No screened drugs of abuse are detected in the blood. Diltiazem is detected in the blood at a level of 0.78 mg/L. No other medications are detected in the blood.
C. Carbon Monoxide: The carboxyhemoglobin saturation in the blood is less than 1%.
D. Cyanide: No cyanide is detected in the blood.

Exhibit 11

AUTOPSY REPORT (b)(6)

Muhammed Al-Ithawi, Taha Daher

OPINION

This Iraqi male, Taha Muhammed Al-Ithawi, died of hypertensive atherosclerotic cardiovascular disease. There was almost complete blockage of two of the three main coronary arteries, and moderate blockage of the third. There was also atherosclerotic disease of the aorta and arteries supplying blood to the legs and kidneys. The heart and kidneys demonstrated changes consistent with hypertension (high blood pressure). The decedent also had a non-healing ulcer on his left foot, consistent with the given history of untreated diabetes. Additionally, the decedent's stay in the hospital was complicated by progressive kidney failure, a myocardial infarction (heart attack), and bleeding in the gastrointestinal tract. Toxicological testing was positive for a medication used to treat hypertension, but otherwise negative. The manner of death is natural.

CONSULTATION REPORT ON CONTRIBUTOR MATERIAL

AFIP DIAGNOSIS **REPORT OF TOXICOLOGICAL EXAMINATION**

Condition of Specimens: GOOD
Date of Incident: 3/29/2008 **Date Received:** 4/3/2008

CARBON MONOXIDE: The carboxyhemoglobin saturation in the blood was less than 1% as determined by spectrophotometry with a limit of quantitation of 1%. Carboxyhemoglobin saturations of 0-3% are expected for non-smokers and 3-10% for smokers. Saturations above 10% are considered elevated and are confirmed by gas chromatography.

VOLATILES: The **BLOOD AND VITREOUS FLUID** were examined for the presence of ethanol at a cutoff of 20 mg/dL. No ethanol was detected.

CYANIDE: There was no cyanide detected in the blood. The limit of quantitation for cyanide is 0.25 mg/L. Normal blood cyanide concentrations are less than 0.15 mg/L. Lethal concentrations of cyanide are greater than 3 mg/L.

DRUGS: The **BLOOD** was screened for acetaminophen, amphetamine, antidepressants, antihistamines, barbiturates, benzodiazepines, cannabinoids, chloroquine, mefloquine, cocaine, dextromethorphan, lidocaine, narcotic analgesics, opiates, phencyclidine, phenothiazines, salicylates, sympathomimetic amines and verapamil by gas chromatography, color test or immunoassay. The following drugs were detected:

Positive Diltiazem: Diltiazem was detected in the blood by gas chromatography and confirmed by gas chromatography/mass spectrometry. The blood contained 0.78 mg/L of diltiazem as quantitated by gas chromatography/mass spectrometry.
