At Approximately 2200 hrs on 28MAY06, I was working CCT Controller at Compound 7, when SSgt. b(6), b(7)(C) Tower 7C relayed over the Icom radio that a detainee had collapsed at the volleyball court. Other detainees brought him up to the Sallyport. SPC b(6), b(7)(C) a medic was across the street at Compound 6 and came immediately over. Two detainees brought him outside the Compound and placed on the bench by the medic shack. SPC b(6), b(7)(C) checked his vital signs and started CPR. TSgt b(6), b(7)(C) took over compressions while SPC b(6), b(7)(C) did mouth to mouth. I then took over for TSgt b(6), b(7)(C) in doing compressions and the detainee was transported to the hospital. While in the HumVW taking detainee to the hospital, myself and SPC b(6), b(7)(C) continued CPR. When we got to the hospital, the detainee was taken out of the vehicle and straight into the emergency room. The medical staff took over for CPR and shocked the detainee several times. The declared him dead at 2258. // End of Statement //

I was responding to a call at Compound 6 when guards from Comp. 7 yelled for me to see a detainee who had passed out. Upon arrival to Comp. 7 at 2200, detainees were carrying the patient to the sally port. Patient appeared in distress and had difficulty speaking. After patient was carried outside of wire, I checked patient for responsiveness: patient was unresponsive, was not breathing and had no pulse. I asked guards to notify ETR of patients condition. I started CPR, when a guard stating he knew CPR also helped. SGT b(6), b(7)(C) prepared the FLA and called Thundercat base. We loaded the patient in the ambulance and transported patient to ETR while I continued CPR. We arrived to ETR at approximately 2210.

PAGE 1 OF 2 PAGES

At 0230, 29 May 06, SA [b(6), b(7)(C)] conducted a death scene examination of the rear portion of Compound 7, Theater Internment Facility (TIF), CBI.

Characteristics of the Scene:

Compound 7 was located on the South East corner of the TIF prior to the processing area. The area where Detainee SALMAN died was located in the rear of the compound on the south side of the compound. The compound was between compound 8 and the process area. The area where Detainee SALMAN died was approximately 100 yards east to west and about 50 yards North to South. The volleyball court where the detainee collapsed was on the southwest corner of compound 7. (See photos and sketch for details)

Conditions of the Scene:

The area was dark and mostly empty. Most of the detainees were either sleeping or with some exceptions sitting around various locations within the compound. There were no unusual items, smells or problems noticed.

Environmental Conditions:

The ground was dry and the temperature was approximately 75 degrees Fahrenheit.

Factors Pertinent to Entry and Exit (EE):

The compound is secured with concertina wire around the backside of the compound in the area that surrounds the recreation area. There are posted guards 24/7 with constant vigil over the detainees. All detainees had access to the recreation area and the volleyball court.

Scene Documentation:

SA [b(6), b(7)(C)] prepared a death scene sketch and attempted to photograph the scene. There was a lack of proper personnel and the amount of resources consumed by attempting to secure over 800 detainees to exam the volleyball court where the detainee collapsed would not have been worth the risk. There were no signs of foul play and the area was visible from the perimeter tower to allow a sketch to be drawn and distant photographs to be obtained.

AGENT'S COMMENT: Due to the lack of proper lighting photographs were postponed.

There was no evidence collected at the scene.

At 1430, 5 Jun 06, SA [b(6), b(7)(C)] completed the scene photos. There was no change in the set up from the first night. Photos were taken from the South side tower, in a clockwise rotation starting from the West. (See photos for details)

AUTOPSY REPORT (b)(6)

SALMAN, Tha'ir Kadu ~~LAW ENFORCEMENT SENSITIVE~~

### EXTERNAL EXAMINATION

The body is that of a well-developed, well-nourished male. The body weighs 174 pounds, is 68" in height and appears compatible with the reported age of 53 years. The body is cold. Rigor is present to an equal degree in all extremities. Lividity is present and fixed on the posterior surface of the body, except in areas exposed to pressure. The scalp hair is Grey (salt/pepper) and has a mustache and unshaven. The irides are brown. The corneae are dull. The conjunctivae are slightly congested. The sclerae are unremarkable. The external auditory canals, external nares and oral cavity are free of foreign material and abnormal secretions. The nasal skeleton is palpably intact. The lips are without evident injury. The teeth are natural and in good condition. Examination of the neck revealed no evidence of injury. The chest is unremarkable. No injury of the ribs or sternum is evident externally. The abdomen is unremarkable. No major surgical scars are noted. The extremities show no evidence of remote or recent trauma. The fingernails are intact. No tattoos are noted. Flat Hyperkeratotic lesions are noted on the knee, bilaterally. A flat raised dark brown Hyperkeratotic lesion is also noted on the dorsum of the left foot. The external genitalia are those of a normal adult circumcised male. The posterior torso is without note.

### EVIDENCE OF THERAPY

Endotracheal tube and gastric tube, properly positioned, multiple IV lines into both antecubital fossae, and EKG pads.

### EVIDENCE OF INJURY

No evidence of major trauma, recent or remote, is identified. An area of recent hemorrhage is noted on the anterior surface of the distal left forearm. The hemorrhage is of unknown significance and is consistent with possible sport trauma (volley ball).

### POSTMORTEM CHANGES

Early changes of decomposition are noted of the upper chest, abdomen and internal organs.

### INTERNAL EXAMINATION

#### BODY CAVITIES:

The body is opened by the usual thoraco-abdominal incision and the chest plate is removed. Extensive adhesions are noted of the right chest cavity between the lung (all lobes) and the chest wall and diaphragm. The etiology of these severe adhesions is unknown. Other body cavities are unremarkable. Small amount of slightly bloody fluid is noted in the left pleural and peritoneal cavities, most probably secondary to postmortem decomposition changes. All internal organs are noted in their normal anatomic position. There is no internal evidence of blunt force or penetrating injury to the thoraco-abdominal region.

- Left anterior descending artery (LAD): Acute rupture of thin-capped fibroatheroma with occlusive thrombus, proximal LAD; chronic total occlusion of mid LAD by fibrocalcific plaque; 60% narrowing of first diagonal artery by fibro calcific plaque.
- Left circumflex Artery (LCA): 60% narrowing of proximal and mid LAC by fibrocalcific plaque with thin-capped atheroma in mid LCA; 70% narrowing of distal LCA by pathologic intimal thickening; chronic total occlusion of left obtuse marginal artery and 50% narrowing of posterior descending artery by pathologic intimal thickening.
- Right Coronary Artery (RCA): chronic total occlusion of proximal RCA by fibrocalcific plaque.

**OPINION**

Tha'ir Kaduri Salman was 53 year-old Iraqi detainee, who collapsed while playing volleyball at an internment facility, died from "Occlusive Atherosclerotic/Thrombotic Coronary Artery Disease", three vessel disease, occlusive thrombus, healed transmural myocardial infarction with patchy myocardial replacement fibrosis of the lateral left ventricle. There was no evidence of major recent or remote trauma. An area of subcutaneous hemorrhage of the left forearm is consistent with sport-related trauma (playing volleyball). Toxicological studies were negative for ethanol, screened medications and drugs of abuse. Manner of death is "natural".

**VOLATILES:** The **BLOOD AND VITREOUS FLUID** were examined for the presence of ethanol at a cutoff of 20 mg/dL. No ethanol was detected.

**DRUGS:** The **URINE** was screened for acetaminophen, amphetamine, antidepressants, antihistamines, barbiturates, benzodiazepines, cannabinoids, chloroquine, cocaine, dextromethorphan, lidocaine, narcotic analgesics, opiates, phencyclidine, phenothiazines, salicylates, sympathomimetic amines and verapamil by gas chromatography, color test or immunoassay.
