On 12 August 2007 at 0100 hr, I was informed that my duty at Compound 30 was to utilize the Bac-Ho (Heavy Equipment ) Digging Mobile to dig 14 feet by 14 feet. SSG (b)(6), (b)(7)(C) the CSL Of Alpha Quad at Compound 30 was there on the site and I asked him, is the Porta John personel here to do the Detainee Latrines. SSG (b)(6), (b)(7)(C) said "no", the porta john personel came already. So when I continued digging, I SGT (b)(6), (b)(7)(C) pulled up more of the red rug and the smell had really surfaced and that is when I SGT (b)(6), (b)(7)(C) stopped digging an SSG (b)(6), (b)(7)(C) said that the body has been found.

Q: By SA (b)(6), (b)(7)(C)

DEATH SCENE EXAMINATION: Between 0940 and 1100, 12 Aug 07, SA (b)(6), (b)(7)(C) and SA (b)(6), (b)(7)(C) this office, conducted a death scene examination of Compound 30A, TIF, Camp Bucca.

CHARACTERISTICS OF THE SCENE: Compound 30A is constructed of metal and canvass type construction "Hesko" barriers, filled with sand, with concertina wire placed on the top. Enclosed inside the compound is an open area used for exercise type activities adjacent to the North wall which is enclosed with Hesko barriers which run the width of the compound. There was a line of grey, tan and white in color, plastic construction portable latrines placed against the dividing wall. In the area between the dividing wall and the South wall there was a group of green and grey in color, canvas type construction tents, measuring approximately 10 feet wide by 20 feet long, which were normally inhabited by numerous detainees. There was one main Entry/Exit way (E/E) to the compound. The E/E was located in the Northwest corner of the compound. Compound 30A is surrounded by Compound 29 to the west, Compound 31 to the east, the main access road of that portion of the TIF to the north and the boundary of the forward operating base (FOB) to the south.

CONDITIONS OF THE SCENE: Compound 30A appeared to be lived in. There were a total of twenty-one tents constructed within the compound, neatly arranged in three rows with seven tents in each row. The detainees were placed in a secured open exercise area while this examination was conducted. There were a small number of tents in the compound dismantled and there was a large hole in one area of the compound measuring approximately 14' long x 10' wide. The remains of Detainee Mohammed AJIMI AL-ISAWI, Internment Serial Number (ISN): (b)(6), (b)(7)(C) were discovered in the hole, by the compound guard force, at a depth of approximately 3 1/2 feet, when the tops of his knees were discovered. Upon being completely unearthed, the torso of Detainee AL-ISAWI was found resting at a depth of approximately 5 1/2 feet. He was positioned on his back. The hands were tied together behind his back at the wrist and his knees were bent at approximately a 45 degree angle. The remains were wrapped in a blanket, numerous small rugs and what appeared to be a plastic trash bag. There were strips of cloth tied around the trash bag to apparently secure the trash bag to the remains. The remains appeared to be in a state of decomposition. The remains had apparent broken legs. The remains were wearing the yellow pants issued to detained persons.

ENVIRONMENTAL CONDITIONS: At the time of the death scene examination, the outside temperature was approximately 110 degrees with partly cloudy skies. The sky was light due to daylight hours.

FACTORS PERTINENT TO ENTRY AND/EXIT: Access to the compound could be gained through the one E/E on the north wall, in the northwest corner of the compound. Access to Compound 30A could be gained through a gate (sally port) on the north side of the compound. A corridor leading to the E/E was constructed of concertina wire in the northwest corner of the compound. The compound was enclosed by Hesko type barriers and concertina wire.

**CAUSE OF DEATH:**

Multiple Injuries

**MANNER OF DEATH:**

Homicide

**EXTERNAL EXAMINATION**

The body is that of a well-developed, well-nourished Caucasian male, clad in a yellow shirt, yellow pants and yellow shorts. Postmortem adipocere changes are noted. A towel is tied around the neck. The legs are loosely tied by a black thin rope. The hands are loosely entangled/tied with a yellow draw string made from the same material as the clothing. The body weighs 79 pounds and is approximately 71" in height. The age of the decedent can not be definitely determined but appears to be of a middle aged man.

The scalp hair is black. The scalp hair is focally disappeared and small scattered patches of hair are noted, due to postmortem changes. Patches of a mustache hair and a beard are noted. The eyelids are unremarkable with no apparent trauma. The eye globes are protruding and collapsed, with no apparent trauma. The irides are pale and grayish. The corneae are whitish and cloudy. The sclerae are white with no apparent hemorrhage or petechiae. The external auditory canals, external nares and oral cavity are free of foreign material or apparent trauma. The nasal skeleton is palpably intact. The tongue is unremarkable with no significant trauma or evidence of sharp force injuries. The lips are unremarkable with no apparent injury. The teeth are natural and are unremarkable.

The neck is surrounded by a towel with a knot on the left side. Focal area of skin discoloration (possible contusion) is noted on the left.

The chest is unremarkable. No injury of the ribs or sternum is evident externally. The abdomen is unremarkable with no evidence of major surgical scars or sharp force trauma. The posterior torso reveals contusions on the back of the chest and upper abdomen. The external genitalia are deformed and reveal extensive postmortem adipocere precluding proper examination. The torso reveals no evidence of sharp force injuries.

The extremities reveal presence of contusions and deformities of the upper extremities at the wrist joints, and fracture of both legs. The left leg is separated/amputated from the proximal leg. The right leg is partially amputated; the distal leg is attached to the proximal leg by thin stripes of skin and subcutaneous tissue. No evidence of sharp force trauma is identified.

No tattoos, major surgical or characteristic scars or other identifying marks are noted.

**EVIDENCE OF INJURY**

Multiple injuries are noted of the neck, torso and extremities and are described below. No evidence of trauma to the eyes or the tongue and no evidence of sharp force injuries are noted.

**A. Injuries of the Head:**

No evidence of blunt or sharp force trauma to the head. No Subgaleal hemorrhage is seen. No skull fractures or evidence of intracranial injury or hemorrhage.

**B. Injuries of the Neck:**

**1. Ligature Strangulation:**

A wide ligature furrow is noted around the neck with a knot impression on the left side of the neck. Examination of the subcutaneous tissue and the muscles of the neck reveal no hemorrhage under the ligature furrow, except focally on the left side. No thyroid cartilage or hyoid bone fractures are noted. An area of localized hemorrhage is noted on the back of the neck, left of the posterior midline (left of the spinal processes of the cervical vertebrae C4-C7). (See below)

**2. Neck Trauma:**

External examination of the neck reveals abnormal hypermobility. Further dissection of the neck reveals focal areas of hemorrhage in the muscles of the neck, mainly on the left side, anteriorly and posteriorly. Removal of the neck organs reveals underlying hemorrhage of the cervical vertebrae C4-C7, under the anterior ligament, left of the midline. The anterior part of the lower cervical vertebrae is removed to document the presence of hemorrhage. The vertebral segment is photographed for documentation, stored in formalin, and retained by OAFME. No gross evidence of fracture is noted. The hemorrhage is consistent with abnormal neck manipulation by hyperflexion or hyperextension.

**C. Blunt Force Trauma to the Torso:**

External examination of the torso reveals suspected contusions on the left shoulder, upper left chest and the back, more prominent on the left side of the posterior midline. Reflection of the skin and subcutaneous tissue reveals no evidence of trauma to the left shoulder or chest. Examination of the back reveals areas of intramuscular hemorrhages on both sides of the thoracic spine, more prominent on the left side. Amount of hemorrhage is considerable though it can not be definitely determined due to post mortem changes. The hemorrhage is also noted in the intercostal spaces of the chest cavity. No evidence of lung injury, rib fractures or compromise of the parietal pleura and chest cavity.

**D. Blunt Force Trauma to the Extremities:**

Examination of the upper extremities reveals deformity of both wrists without fractures. No hemorrhage is noted of the wrist joints. Examination of the subcutaneous tissue and

**AL-ISAWI, Mohammed Ajimi**

muscles reveals an area of hemorrhage on the posterior left arm. No associated fracture is noted.

Examination of the lower extremities reveals areas of contusions on the anterior proximal thighs. No femoral fractures are noted. Examination of the legs reveals bilateral comminuted fractures of the tibia and fibula on both sides. The fractures reveal no surrounding hemorrhage, suggestive of being the result of postmortem trauma. The left leg is completely amputated from the proximal leg. The right leg is essentially amputated, and is only attached to its proximal part by a stripe of skin and subcutaneous soft tissue.

### INTERNAL EXAMINATION

#### BODY CAVITIES:

The body is opened by the usual thoraco-abdominal incision and the chest plate is removed. No adhesions or abnormal collections of fluid are present in any of the body cavities. All body organs are present in the normal anatomical position. The lungs and heart are collapsed. There is no internal evidence of blunt force or penetrating injury to the thoraco-abdominal region. No abnormal collection of blood or fluid is noted in the body cavities.

#### HEAD: (CENTRAL NERVOUS SYSTEM)

The scalp is reflected. No evidence of trauma is noted. The calvarium of the skull is removed. The dura mater and falx cerebri are intact. There is no epidural or subdural hemorrhage present. The leptomeninges are thin and delicate. The cerebral parenchyma reveals extensive postmortem decomposition precluding proper examination of the intracranial contents. No trauma or hemorrhage is noted. The brain weighs 880 grams.

#### NECK:

Examination and dissection of the soft tissues of the neck, layer-by-layer, reveal abnormal mobility and focal neck trauma. The thyroid cartilage and hyoid bone are intact. See "Evidence of Injury" above".

#### CARDIOVASCULAR SYSTEM:

The pericardium is intact. The pericardial sac is free of fluid and adhesions. The coronary arteries arise normally, follow the usual distribution and are patent, without evidence of atherosclerosis or thrombosis. The chambers and valves exhibit the usual size-position relationship and are unremarkable. The myocardium is pale brown and reveal marked postmortem changes. The atrial and ventricular septa are intact. The aorta and its major branches arise normally, follow the usual course and are unremarkable without significant atherosclerosis and other abnormality. The venae cavae and their major tributaries return to the heart in the usual distribution and are free of thrombi. The heart weighs 80 grams.

**AL-ISAWI, Mohammed Ajimi****RESPIRATORY SYSTEM:**

The upper airway is clear of debris and foreign material; the mucosal surfaces are unremarkable except for postmortem changes. The pleural surfaces are unremarkable bilaterally. The pulmonary parenchyma is grey and reveals no focal lesions. The pulmonary arteries are normally developed, patent and without thrombus or embolus. The right and left lung weigh 70 grams and 60 grams, respectively.

**LIVER & BILIARY SYSTEM:**

The hepatic capsule is smooth and intact, covering dark brown parenchyma with no apparent focal lesions. The gallbladder is intact and contains no bile; the mucosa is unremarkable. The extrahepatic biliary tree is without evidence of calculi. The liver weighs 390 grams.

**ALIMENTARY TRACT:**

The tongue exhibits no evidence of injury, except a small contusion on the right side. No evidence of significant injury or sharp force trauma. The esophagus is lined by gray-white mucosa. The gastric mucosa is autolysed with thin wall and no rugal folds. The lumen contains a black pasty material submitted for toxicology. The small and large bowel is unremarkable. The pancreas is autolysed. The appendix is present and unremarkable.

**GENITOURINARY SYSTEM:**

The renal capsules are smooth and thin and strip with ease from the underlying renal smooth brown cortical surfaces. The cortices are delineated from the medullary pyramids, and unremarkable. The calyces, pelves and ureters are unremarkable. The urinary bladder mucosa is unremarkable and contains no urine. The right and left kidneys weigh 20 and 30 grams, respectively. The external genitalia are those of an adult male, but could not be properly examined secondary to the marked postmortem changes. The testes are grossly unremarkable.

**RETICULOENDOTHELIAL SYSTEM:**

The spleen has a smooth, intact capsule covering pasty purple parenchyma; and grossly unremarkable. No enlarged lymph nodes are seen. The spleen weighs 20 grams.

**ENDOCRINE SYSTEM:**

The pituitary, thyroid and adrenal glands are grossly unremarkable except for the prominent postmortem changes.

**MUSCULOSKELETAL SYSTEM:**

Muscle development is normal. No non-traumatic bone or joint abnormalities are noted. See "Evidence of Injury".

**EVIDENCE COLLECTION**
