031-03-CID519-62147

PACIENT: (b)(6)-4  
ISN #: (b)(6)-4 EPW

CLINIC HISTORY:

Hematoma in posterior region of left elbow with pain in epitroclea and epicondyle. X-rays suggest small fragment (acute or old) of epicondile, because he was operated in the past of humeral fracture, consolidated actually (with osteosynthesis).

I recommended brachial splint that was refused by the patient waiting for evolution.

He wanted pills AINE,s and so it was done.

DIAGNOSTIC: Traumatic hematoma of left elbow.
