S = Susceptible
I = Intermediate
R = Resistance
MIC = mcg/ml (mg/L)

N/R = Not Reported
--- = Not Tested
TFG = Thymidine-dependent strain

Blank = Data not available, or drug not advisable or tested
ESBL = Extended spectrum beta-lactamase
Blac = Beta-lactamase positive

R* = Resistant due to extended spectrum beta-lactamases (ESBL)
EBL? = Suspected ESBL. Confirmatory tests needed to differentiate ESBL from other beta-lactamases.
IB = Inducible Bela-lactamase. Appears in place of Sensitive with species known to possess inducible beta-lactamases; potentially they may become resistant to all beta-lactam drugs. Monitoring of patients during/after therapy is recommended. Avoid other/combined beta-lactam drugs.

For blood and CSF Isolates, a beta-lactamase test is recommended for Enterococcus species.

(a) Use maximum doses of drug with an aminoglycoside for P. aeruginosa in patients with granulocytopenia or serious infections.
(b) Breakpoints based on parenteral dose. For cefuroxime axetil (PO) use (8=S, 8-16=I, >16=R) Footnote (c) applies to this drug.
(c) For streptococci refer to penicillin interpretations. For amoxicillin/K clavulanate or ampicillin/sulbactam with enterococci, refer to the penicillin interpretation
(d) For non bela-lactamase producing enterococci, refer to the penicillin interpretation. Footnote (a) also applies to this drug

Interpretive breakpoints are based on NCCLS M100-S12 Jan 2002. Sparfloxacin (for Gram Negative isolates) and moxifloxacin are based on FDA approved breakpoints. For S. pneumoniae, cefotaxime and ceftriaxone breakpoints are based on isolates from patients with meningitis. For non-meningitis infections, use <2=S, 2=I, >2=R.
